About me

I've started my career in 2001 as a classic ASP developer in Optimus a telecom company, and I'm currently working as a senior developer in a team that is developing a 360° solution to manage all the business work flow end to end. I've the role of scrum master managing the team so that the sprints are delivered on time and as expected. I'm also responsible by architecture of solutions.

As part of my attributions is expected from me to challenge the team so that all are equalized as technical knowledge goes.

I love tech communities and I'm active on them going to meetups, doing technical presentations and demos.

I'm also active involved in social projects that join technology and social change. My latest on was Hack For Good promoted by Gulbenkian Foundation, one month ago. I've developed software to manage the process of reconverting refugees into developers. I've used Azure and C# to do it.

Experience

Travelstore, Lisboa— *Senior developer*

October 2016 to present

Implementation of CRM system for travel making use of .NET technologies in C# through MVC and WebApi.

With the mission of implementing the most scalable architecture with the aim of migrating from legacy in-house services to cloud-friendly services, using a microservices architecture pattern. Migg Systems, Lisboa— *R&D tech /developer*

January 2006 - October 2016

Overview

Scrum practitioner and Agile techniques with strong emphasis on team autonomy responsibility. Passionate about innovation in hardware and software related to IOT.

Frequent attendee of Meetups and tech community events such as AngularJS PT, Netponto, GDG (Google Developer Group)

Main awards and contests

1º Place - EDP IoTChallenge

Technologies used: service bus in Azure, Sql Azure Database, sigfox.
Hardware: Arduino, ESP 8266

Team in the three finalists of the Lisbon Green Hackathon

Technologies used: SQL Azure, Azure Table Storage, Azure Apps

Team the 10 finalists in Hack for Good Gulbenkian

Technologies used: SQL Azure, Azure Apps, MVC, Web Api, Bots

Smart Open Lisbon real life experimentation phase Equipa

Technologies used: SQL Azure, Azure Apps, MVC, Web Api, C, Arduino, ESP 8266

Languages

English, French, Portuguese

Responsible for the evaluation of technologies for integration in projects of customer management, operations, billing.

Evaluation and in some cases incorporation after evaluation of technologies like AngularJs, Webservices (soap and no soap), NodeJs, RabbitMQ.

Management of the solution development process with the client.

#Main Activities

Analysis and architecture planning; Test technologies and patterns

#Tech stack

JavaScript; SOAP; Oracle; HTML; CSS; AngularJS; JQuery; NodeJs; RabbitMQ; Azure Cloud; Azure Functions

Tech keywords

AngularJs, MVC, Web Api, Cake(PHP Framework), Javascript; C#

SonaeCom, Lisboa— *Project Manager*

January 2005 - January 2006

Implementation of processes to support services and tariffs in the Optimus brand according to the requirements of the marketing area, with the mission of reducing the impact in the areas of call center and support. This function implied the coordination of teams from activation, IT (internal and external), bill review, network, training, information management, provisioning services.

#Main Activities

Plan process to reduce impacts and costs; Evaluate requirements and specifications; Test service usage and support; Managing projects

Optimus, Lisboa— *Solutions Engineer*

January 2003 - January 2004

Full stack developer @optimus CRM developer team.

Build an architecture and deploy a platform to analyze risk, activate our billing systems and prepare for network provisioning for future Novis customers

#Main Activities

Analysis and architecture planning; Code Implementation

#Tech stack

Shell Script (unix), PL / SQL (Oracle), Asp Calassic (VB)

Optimus, Lisboa— *Intranet developer*

January 2001 - December 2002

Build several intranet apps to support information flow.

Main projects:

Web interface for consulting the company crm. This project started because the desktop application took a long time to boot and regularly had errors that crashed the desktop application.

Application to manage the flow of aftersales of equipments based on customer profile, equipment and customer profile.

#Main Activities

Analysis and architecture planning; Code Implementation

#Tech stack

PI-SQL; ASP Classic; HTML; CSS

Other projects

Hack for Good – Refugee challenge —*Gulbenkian Foundation*

June 2017

Project developed in 24 hours in which we built a portal for certification, registration and preparation for the reconversion of refugees work functions. It was intended to set up a program for civil society where tutors and refugee courses were organized to be integrated into the Portuguese labor market, namely through the reconversion of skills for IT.

The project was among the 10 finalists.

#Main Activities

Project Management; Product Management; Product Pitch to jury, Analysis and architecture planning; Code Implementation

#Tech stack

MVC , Azure Cloud, Azure Apps, Bots

Edp iot hackathon — *By EDP and Microsoft*

March 2017

EDP's technological challenge of how to read a counter through a HAN port and send the data to a cloud through Sigfox.

The main goal was to encapsulate the technology in a product that serves EDP

customers.

Video about the final project: <https://www.youtube.com/watch?v=RBwI8gggyA>

UnLocLx — *Smart Open Lisboa*

July 2016

Project for the Lisbon City Council on the distribution of people in the city and how to make it safer for more fragile citizen groups such as the elderly and children. It was also intended to perceive the occupation of space by people and objects.

The project was selected for the real-life experimentation phase in Lisbon, with the sponsorship of the city council

#Main Activities

Project Management; Product Management; Product Pitch to jury, Analysis and architecture planning; Code Implementation

#Tech stack

MVC, WebApi, Azure Cloud, Azure IOT Hub. Hardware: Arduino, ESP8266

Hack for Good – Eldery challenge — *Gulbenkian Foundation*

March 2016

A fully developed project during the 28 hours hack that lasted the event, to make home environment safer for the elderly while at the same time reassuring their family about person's environment current state, by providing a point of contact for both, with real-time information for caregivers, family, friends, neighbors or social private institutions, using IOT devices in the client's home and wearables used by the elderly.

#Main Activities

Project Management; Product Management; Product Pitch to jury, Analysis and architecture planning; Code Implementation

#Tech stack

MVC , Azure Cloud, C, Arduino

Education

Udemy — *MongoDB Essentials - Understand the Basics of MongoDB*

November 2016

Certificado UC-6Z8H5WDQ

My main goal: Understand the basics of MongoDB

Udemy — *Make your agile team faster and more productive*

June 2016

License UC-2T37A1O7

My main goal: Recognize and overcome impediments in Scrum

Universidade internacional, Lisboa — *Law degree*

1995 - 2000

Law degree with a final average of 14
